TUGAS PENDAHULUAN MODUL 2 OOP

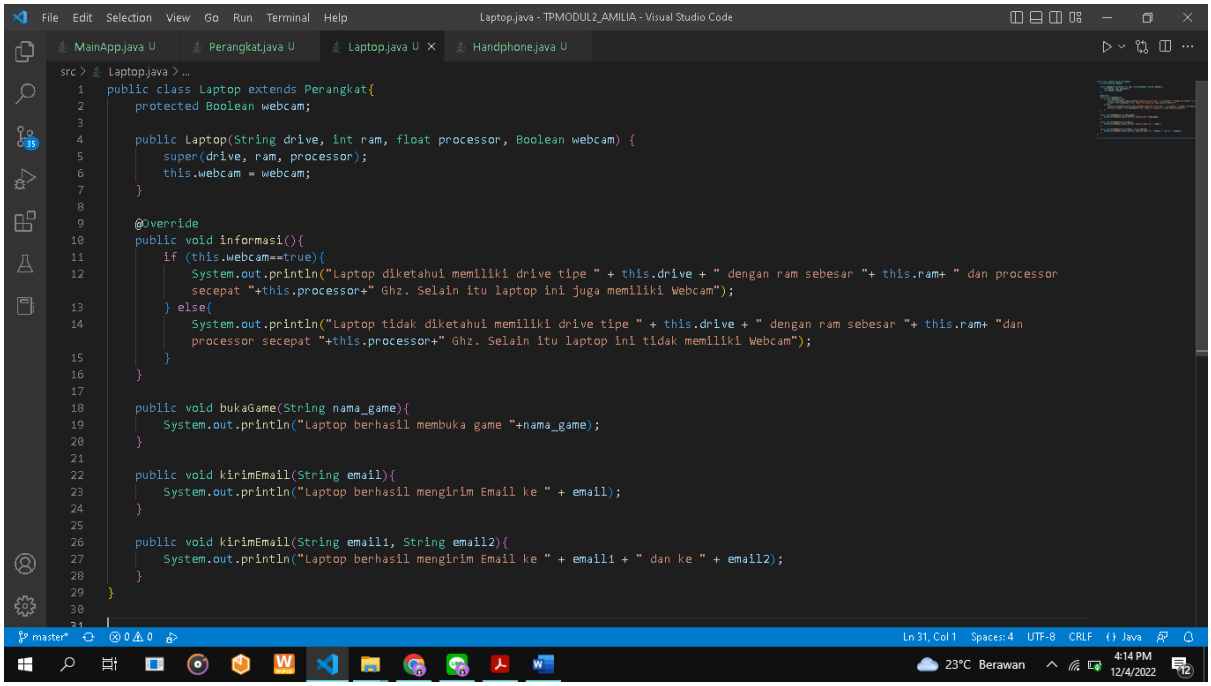

Class MainApp

Class Perangkat

Class Laptop

```java
public class Laptop extends Perangkat{
    protected Boolean webcam;

    public Laptop(String drive, int ram, float processor, Boolean webcam) {
        super(drive, ram, processor);
        this.webcam = webcam;
    }

    @Override
    public void informasi(){
        if (this.webcam==true){
            System.out.println("Laptop diketahui memiliki drive tipe " + this.drive + " dengan ram sebesar "+ this.ram+ " dan processor
            secepat "+this.processor+" Ghz. Selain itu laptop ini juga memiliki Webcam");
        } else{
            System.out.println("Laptop tidak diketahui memiliki drive tipe " + this.drive + " dengan ram sebesar "+ this.ram+ "dan
            processor secepat "+this.processor+" Ghz. Selain itu laptop ini tidak memiliki Webcam");
        }
    }

    public void bukaGame(String nama_game){
        System.out.println("Laptop berhasil membuka game "+nama_game);
    }

    public void kirimEmail(String email){
        System.out.println("Laptop berhasil mengirim Email ke " + email);
    }

    public void kirimEmail(String email1, String email2){
        System.out.println("Laptop berhasil mengirim Email ke " + email1 + " dan ke " + email2);
    }
}
```

Class Handphone

```java
public class Handphone extends Perangkat{

    protected Boolean fingerprint;
    public Handphone(String drive, int ram, float processor, Boolean fingerprint) {
        super(drive, ram, processor);
        this.fingerprint = fingerprint;
    }

    @Override
    public void informasi(){
        if (this.fingerprint==true){
            System.out.println("\nHandphone ini memiliki drive tipe " +  this.drive + " dengan ram sebesar " + this.ram + " GB dan
            processor secepat " + this.processor + "Ghz. Selain itu handphone ini memiliki Fingerprint");}
        else{
            System.out.println("\nHandphone ini memiliki drive tipe " +  this.drive + " dengan ram sebesar " + this.ram + " GB dan
            processor secepat " + this.processor + "Ghz. Selain itu handphone ini TIDAK memiliki Fingerprint");
        }
    }

    public void telfon(int no_hp){
        System.out.println("Handphone berhasil menyambung telfon ke No " + no_hp);
    }

    public void kirimSMS(int no_hp){
        System.out.println("Handphone berhasil mengirim SMS ke No " + no_hp);
    }

    public void kirimSMS(int no_hp1, int no_hp2){
        System.out.println("Handphone berhasil mengirim SMS ke No " + no_hp1 + " dan ke " + no_hp2);
    }
}
```

Hasil Output
